quickly   Sync and share images   Edit your pictures   Make slideshows and movies   Print your images   Create books, calendars, and cards   Why Photos? The answer: Speed and stability. Nowadays, in the phone-camera era, photography has exploded in popularity and quantity. The world has gone picture-mad. We post 1 million photos a day on Flickr, 35 million a day to Twitter, 40 million a day on Instagram, and a boggling 350 million photos a day to Facebook. Now, iPhoto was a respected, time-honored hero for its dayÃ¢Â Â"but after 13 years, its code had become overrun by software weeds. The thing was being propped up by patches for patches. Photos for the Mac, on the other hand, is all new. ItÃ¢Â Â™s modern and sleek, designed from the beginning to handle huge photo collections, videos, and the kinds of specialized photography made possible by the iPhone, like slow-mo video, burst-mode photos, time-lapse video, and panoramas. The combination of Photos (for iOS) and Photos (for the Mac) also work together in some spectacular waysÃ¢Â Â"like iCloud Photo Library. This feature, should you choose to accept it, stores all of your photos and videos onlineÃ¢Â Â"and lets you view them on any Apple product (Mac, iPhone, iPad, etc.) identically. Change a photo on your Mac, and you see that change instantly reflected on your phone, and so on.
