Cyber Warfare (Prepping For Tomorrow Book 3)

Synopsis

I know not with what weapons World War III will be fought, but World War IV will be fought with sticks and stones. ~ Albert Einstein
No bombs. No bullets. No swordfights. Just a few keystrokes on the computer. And we're done.
In poll after poll, one of the threats facing our nation is the use of a cyber attack to cause a grid down scenario. There are many bad actors on the international stage capable of cyber terror on a massive scale. The list is long, including Russia, China, North Korea, Iran, Syria and now even terrorist groups like ISIS. Each is capable of wreaking havoc in the US by shutting down our power grid and enjoying the resulting chaos. No bombs. No bullets. No swordfights. Just a few keystrokes on the computer. And we're done.
Cyber Warfare is a primer on the threats we face as a nation from the bad actors mentioned above. It explores the history of cyber attacks, and discusses the nuances of the terminology. United States, and its allies, have evolved over the past decade in its policies. The problem is attribution is explored as cyber space allows hackers a convenient place to hide. The all important issue is raised: When does a cyber attack become an act of war?
After a thorough review of the threat a Cyber War poses for America, in particular the critical infrastructure, Cyber Warfare will provide preparedness solutions. This guide will also help you answer the question: What if the preppers are right?
ABOUT THE PREPPING FOR TOMORROW SERIES
Freedom Preppers came together in 2011 to share research with others on the subject of prepping. Originally designed as an informational website, FreedomPreppers.com quickly grew in prominence as its articles on preparedness were shared around the web. The goal of the Prepping for Tomorrow series is twofold. First, provide a detailed analysis of the threats we face as Americans. Second, give new and seasoned preppers alike the opportunity to enhance their preparedness plan with this knowledge.

Customer Reviews

We comfortable, average Americans are so uninformed and clueless when it comes to cyber attacks, or as our president calls them, cyber vandalism. If you are like me the world of cyberspace is so complicated you just accept what you are told. Forget the research, it's too complicated. My mind won't stay focused on something I can't understand. That lack of knowledge and understanding can lead us to complacency and acceptance of whatever we are told or, led to believe, because it is easier. Ease is the culprit of being unprepared. Wouldn't you rather be prepared than caught unaware and unprepared? As a member of the general public I could go along my merry way happy in my blissful situation--that is, till TEOTWAWKI. And a greater majority of my fellow citizens would find themselves as clueless about what just occurred as I. That is where the problem lies. Too many unprepared folks who want the same things will certainly lead to survival of the fittest. I don't know about you, but I don't plan on having to fight for a crumb of bread or anything else I need to sustain my life and the lives of my family. Bobby Akart is a committed prepper who wants to share his skills and knowledge with everyone who has need of his knowledge of what it takes to survive. From Bobby's research we learn the threat of cyber warfare is very real. Does anyone remember the Sony cyber invasion of last year? Maybe it was only cyber vandalism, as the president said, or just maybe it was more. It absolutely disrupted Sony, causing delays and changes of plans. If hackers can change the plans of a huge company like Sony, with the latest technology, what can they do to our armies. In this book Bobby uses a quote from a D.C official, "...
