The Prepper's Guide To Caches: How To Bury, Hide, And Stash Guns And Gear

Synopsis

There are a variety of circumstances where creating a cache is a wise preparation. Natural and man-made disasters abound in our headlines, many of which can completely destroy valuable preps in a matter of seconds. With proper techniques, equipment, and methods, practically any type of critical supplies can be safely stored in a manner that is nearly impervious to the elements. The largest single threat to any cache, however, is being discovered by other people. This guide will provide the reader with several methods, including disguise, diversion, and technology to defeat even the most sophisticated metal detectors, theft, or illegal seizure. Widely acclaimed author Joe Nobody, known for his fictional works as well as highly regarded survival and preparation guides, is joined by T. Pike, USMC. During his two deployments in Afghanistan, Pikeâ™s job with the Marines included searching for enemy caches. He found a lot of them, denying his foe important weapons, ammunition, and supplies. He also developed a unique level of expertise and experience that can now be leveraged by anyone who wishes to keep their personal assets out of harmâ™s way.

Book Information

Paperback: 104 pages

Publisher: Prepper Press (December 13, 2015)

Customer Reviews

Excellent and informative. Much bigger scope than what the titles implies. I thought it was going to start off stupid (judging from the topic, not the author who is well known and highly experienced and credible) like burying PVC tubes in your rose garden. Very well written and enjoyable to read.

I'm new to the whole preparedness movement and as such I'm always seeking new ideas. This book contained a lot of information. Some of it is more useful than others but that will vary from

person to person. I recommend getting this and reviewing the information contained therein.

Author advocates for sensible and legal caches. Discussed several different methods depending on your time, environment, and location. I would have liked more depth on deception tactics and how to deal with metal detectors, canines, and prolonged searches.

If we were back home with hundreds of acres...it would be easy to do this. But in the SW...and without any idea as to where to stash supplies...it is so flat and open here...it makes it to me...difficult. I miss my home in NE ! I am looking for a book that tells you how to bury safely and securely on a "moonscape"...as that is what I consider this area. Thank you.

Joe Nonody is great !He has a no nonsense style of giving you the information to make informed decisions. This book is filled with the whys and how's to help you be prepared for many different situations that could happen. Do not put all your eggs in one basket.

Not as good as his "holding your ground," but a worthy beginning for a difficult subject, especially if you don't live in the country. I am over 70, and bugging out is not so easy. "holding your ground" certainly includes caching, but it seems likely to not work so well if high tech searchers are involved. Still it is useful as a starting place.

Read several chapters...was suitably impressed by some of the information given and gave the manual to a 'good friend' as a gift...He too was impressed with the information given within the manual...

Alot of common sense ideas, with great tips.
