# Histology: A Text And Atlas: With Correlated Cell And Molecular Biology

## Synopsis

Now in its seventh edition, *Histology: A Text and Atlas* is ideal for medical, dental, health professions, and undergraduate biology and cell biology students. This best-selling combination text and atlas includes a detailed textbook, which emphasizes clinical and functional correlates of histology fully supplemented by vividly informative illustrations and photomicrographs. Separate, superbly illustrated atlas sections follow almost every chapter and feature large-size, full-color digital photomicrographs with labels and accompanied descriptions that highlight structural and functional details of cells, tissues, and organs. Updated throughout to reflect the latest advances in the field, this *two in one* text and atlas features an outstanding art program with all illustrations completely revised and redrawn as well as a reader-friendly format including red highlighted key terms, blue clinical text, and folders that cover clinical correlations and functional considerations. **NEW!** All illustrations are now completely revised and redrawn for a consistent art program.**NEW!** *Histology 101* sections provide students with a reader-friendly review of essential information covered in the preceding chapters.**NEW!** Updated cellular and molecular biology coverage reflects the latest advances in the field. More than 100 atlas plates that incorporate 435 full-color, high-resolution photomicrographs. Reader-friendly highlights including red bold terms, blue clinical text, and folders featuring clinical and functional correlations that increase student understanding and facilitates efficient study. Easy-to-understand tables aid students in learning and reviewing information (such as staining techniques) without having to rely on rote memorization. Features of cells, tissues, and organs and their functions and locations are presented in easy-to-locate, easy-to-review bulleted lists. Additional clinical correlation and functional consideration folders have been added providing information related to symptoms, photomicrographs of diseased tissues or organs, short histopathological descriptions, and molecular basis for clinical intervention.

## Book Information

Paperback: 992 pages

Publisher: LWW; 7 edition (January 19, 2015)

Language: English

ISBN-10: 1451187424

ISBN-13: 978-1451187427

Product Dimensions: 10.6 x 8.6 x 1.2 inches

Shipping Weight: 4.6 pounds (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 stars [See all reviews](#) (84 customer reviews)

Best Sellers Rank: #22,207 in Books (See Top 100 in Books) #1 in Books > Medical Books > Basic Sciences > Histology #1 in Books > Textbooks > Medicine & Health Sciences > Medicine > Basic Sciences > Histology #44 in Books > Textbooks > Medicine & Health Sciences > Medicine > Basic Sciences > Anatomy

## Customer Reviews

Wow! I bought this book a couple of months ago, but just got around to opening it up last night to study for a histology test. I expected to find a slew of labelled photomicrographs to review, but this book is actually so much more! It is really an anatomy, physiology and histology text all in one - and it is done very very well. The book is divided into 24 chapters, with chapters by system, tissue type, basic cell biology as well as tissue/slide preparation. Each chapter covers the anatomy and physiology of the system or tissue in question extremely well. The text gets right to the point, but is still very complete in its explanations. Within each paragraph, key words are bolded in red, so you can quickly find the exact topic you are interested in within a subject. All topics are supplemented with fully labelled light and electron photomicrographs of each structure, tissue and cell. Illustrations also accompany a majority of the micrographs to clarify things. All illustrations and micrographs are thoroughly labelled. Within text pictures are typically 1/4 to 1/2 page in size, and each chapter has its own set of full-page color plates for even better up-close visualization and study. The full-page color photomicrographs at the end of each chapter are fully labelled, but go even further than that with exact descriptions of each label on the opposing page. This is really amazing, because, for instance, on a slide of the kidney that I was studying, not only were the proximal and distal tubules and collecting ducts labelled, there were also accompanying descriptions on the opposing page as to why one was different from another in these very similar looking structures.
