Customer Reviews

Starting off it has a risk section, but unfortunately they don't go into detail, they just tell you to

discuss with your doctor. Kidneys Issues: One a Ketogenic diet is not a high protein diet so you aren't going to be injuring your kidneys, now if you are in kidney failure or stage 3 then you should worry, otherwise no. Future Osteoporosis- all it says is that some people excrete Calcium from their kidneys, who does this relate to, they didn't say what types of category these people fall in, is it generally or Ketogenic, they don't say. Even if that was the case, calcium is only one nutrient in the aspect of bone health and a Ketogenic diet doesn't leach calcium anymore than a standard diet. In fact without the grains hindering your gut you may absorb it better, especially with all the fat soluble vitamins you will get going Ketogenic. THEN the clincher-Elevated cholesterol- immediately they say that animal fats are bad and full fat dairy is bad, which is patently false and do not raise your cholesterol or heart disease risk- saturated fat has been vindicated time and time again in studies. You should be eating plenty of animal fats and saturated fats on a Ketogenic diet. I think maybe for safety sake they put that in there because that is what the status quo recommend. It seems rather foolish to put that in there and it is confusing to the rest of the book. Alright in the next they do manage to set the record straight about Diabetic Ketoacidosis, any good keto book should make you aware of the difference. Unfortunately they do not warn you about the withdrawal symptoms from grains and sugar, anywhere from 7 days to a month you may struggle to get into ketosis because you are a sugar burning machine instead of a fat one.
