This is a good field guide but it is not what quite what I expected. I am a new EMT and I just wanted something a more comprehensive than the little wallet cards to keep with me in case I was unsure of something in the field. This certainly is that, but it also has more of a study guide function to it and does go into ALS topics. The field guide is broken up into several sections: airway, resuscitation, medical, pediatrics, nuero, poisons, trauma, medications, drugs, abbreviations, spelling, Spanish, conversions, and a section to add your own notes. This is more like a hard copy of Google for the EMT and it is a lot of material in a very small package, which means there are a lot of abbreviations and it is fairly small and compact print. I can be confident that there will be something in here for anything I can run into in the field but I definitely think you would need to spend a little time getting familiar with where everything is, how the book is laid out, and the abbreviations they use or else you will most likely just end up fumbling through this in a stressful situation. There are some really great tables in this book like comparisons between hypoglycemia and hyperglycemia and croup versus epiglottitis. There is also some stuff in here that is pretty dumb to be honest, for instance they go over very simple BSI, if you don't know that you need to wear gloves on a call maybe you shouldn't be in the field in the first place. I would also recommend reading through this and knowing what information you don't agree with. For instance it says meningitis is not airborne and not a great risk to rescuers.
