Population-Based Nursing, Second Edition: Concepts And Competencies For Advanced Practice

Synopsis

Praise for the First Edition: This book nicely integrates epidemiological concepts, evidence-based practice in population health, and program development and evaluation...Authors describe epidemiological research designs, research synthesis, and evidence assessment--knowledge essential for advanced practice nurses working with populations or in the community --Journal of Community Health Nursing This second edition continues to be the only advanced practice nursing text to focus on core competencies in both epidemiology and population health. It delivers essential content for doctoral nursing practice (DNP) as outlined by the AACN, and encompasses the many changes in health care that affect populationbased nursing, including the latest requirements set forth by the enactment of the Affordable Care Act (ACA). Completely updated chapters include relevant case examples that exemplify successful strategies nurses have used to improve population outcomes. This edition provides a strong foundation in epidemiologic methodology, including mortality measures, the validity and reliability of testing, study designs, sample size, assessing risk and causality, and data analysis and interpretation. The text describes the role of the APRN in identifying and mitigating health care disparities at the local, national, and global level, and provides guidance on how to conduct community assessments. New topics include pay for performance implemented by the Centers for Medicare and Medicaid Services (CMS), the overconsumption of salt, the increasing use of electronic cigarettes, toxic stress, and more. High-level discussion questions and exercises help to reinforce core concepts. In addition to its value as a primary course textbook in a DNP program, the text also serves as a supplementary text for graduate community health nursing programs. New to the Second Edition: Includes a strong focus on both epidemiology and population-based nursing competencies Explains how new technology and social media can be used to improve population outcomes and develop innovative interventions Presents a timely new chapter on global health in population-based nursing Covers ACA-related requirements, such as conducting community health needs assessments Presents expanded information on causality and confounding, and describes a comprehensive approach to measuring and interpreting survival data, including prognosis Offers new online materials for faculty including answers to problem sets and supplemental discussion questions

Book Information

Paperback: 328 pages

Publisher: Springer Publishing Company; 2 edition (September 15, 2015)

Language: English

ISBN-10: 0826196136

ISBN-13: 978-0826196132

Product Dimensions: 7 x 0.6 x 9.9 inches

Shipping Weight: 12.6 ounces (View shipping rates and policies)

Customer Reviews

I purchased this book as a supplement to my text, as I felt that it had more relevant information. I was not wrong. The material is easy to read, and is sorted in an easy to find format.

Excellent text. Easy to read and understand.

Arrived on time and in excellent condition.

Needs colors and or bold faced important topics . Book is very hard to follow if not highlighting important areas
